👤 PROFILE

- More than 120 web sites and platforms developed personally (front and back end)
- I deploy infrastructure of any complexity based on Wordpress or Opencart CMS
- I have a rich practice of website optimization for organic search and marketing activities
- I love to refactor code and constantly learn new things in JS and PHP
- I love to write code and see the results of my efforts

📁 EMPLOYMENT HISTORY

Front end developer (php + js) at VINIT LLC

September 2018 – till now

- deploying a server (linux Centos with all components, protections and basic settings) or choosing a ready-made hosting also with detailed settings for the project
- deployment of the required CMS (depending on the workload, functionality, etc.), modification of the MySQL database for the tasks of the project, installation of the necessary add-ons for the project. Opencart CMS, Wordpress CMS, MySQL, PHP, JQuery
- creating all the functionality without styling, using the standard CMS functions and adding all the missing functionality. Creation of the output of the entire interface taking into account most of the requirements of search engines to the speed of the resource. PHP, JS and JQuery
- development of all necessary integrations (delivery, payment, CRM, authorization, exchange rates, bulk management). PHP Curl, Rest API, Google cloud, XML / YML, PHP, PHP Query, JS and JQuery.
- doing all the work for SEO optimization, such as Schema.org microdata, OG Graph, FB and Google marketing, etc. Also, the creation of a multilingual meta markup generator for SEO TK. PHP, JS
- typeset the entire design immediately onto the existing interface. HTML (sometimes pug), CSS (sometimes SCSS), JS / JQuery (as needed), Bootstrap (as needed), Ajax, Photoshop | Figma
- after receiving a bug report, bug fix and finalizing the product
- resource transfer to the customer's capacity
- writing instructions for use and technical description of features

In addition to creating a turnkey product, I also receive tasks to improve someone else's code and new functionality, for example:

- creating calculators
- integration of libraries (3d panoramas, constructors, readers, etc.)
- website development on ready-made premium templates
- creation of self-written admin panels for mobile applications / small sites

HTML Coder at Y-not

August 2017 — September 2018

Typeset the entire design immediately onto the HTML.

HTML (sometimes pug), CSS (sometimes SCSS), JS / JQuery (as needed), Bootstrap (as needed), Photoshop

🎓 EDUCATION

Master's, Kyiv Slavonic University

2003 — 2008
